

Better. Smarter. Faster.

RENEGADE is a highly-effective demulsifier that dramatically simplifies the processing of Drilling Mud waste streams. Used at low temperatures and in low concentrations, it separates the homogeneous mix of oil, water and solids, allowing for the simpler removal of oil for recycling and the settling out of solids for more efficient waste-water treatment.

RENEGADE

Demulsifier for Drilling Mud Waste Treatment

RENEGADE is formulated to lower oil-water solubility at low temperatures, splitting Drilling Mud into two or three distinct layers – oil, water and solids. Oil at the surface can be reclaimed for recycling. Solids settle, separating from water. Resultant water portion should be treated and disposed of in accordance with local regulations.

Better Cleaner

The carefully engineered formula separates the constituent elements of Drilling Mud streams quickly at low temperatures.

Smarter Cleaner

RENEGADE removes more oil from water at lower temperatures, ensuring that the quality of the reclaimed oil is high while also helping to keep the overall treatment costs down.

Faster Cleaner

The fast-acting formula separates oil from water in less than 24 hours, dramatically reducing the time and cost spent readying the effluent for entry to the waste water treatment system.

AVAILABLE QUANTITIES

20 L pails
200 L drums
1000 L totes
